Silent Sound Spread Spectrum

The Sound of Silence is a military-intelligence code word for certain psychotronic weapons of mass mind-control tested in the mid-1950s, perfected during the 70s, and used extensively by the "modern" US military in the early 90s, despite the opposition and warnings issued by men such as Dwight David Eisenhower.

This mind-altering covert weapon is based on something called subliminal carrier technology, or the Silent Sound Spread Spectrum (SSSS) (also nicknamed S-Quad or "Squad" in military jargon). It was developed for military use by Dr. Oliver Lowery of Norcross, Georgia, and is described in US Patent #5,159,703 "Silent Subliminal Presentation System" for commercial use in 1992. The patent abstract reads:

A silent communications system in which nonaural carriers, in the very low (ELF) or very high audio-frequency (VHF) range or in the adjacent ultrasonic frequency spectrum, are amplitude- or frequency-modulated with the desired intelligence and propagated acoustically or vibrationally, for inducement into the brain, typically through the use of loudspeakers, earphones, or piezoelectric transducers. The modulated carriers may be transmitted directly in real time or may be conveniently recorded and stored on mechanical, magnetic, or optical media for delayed or repeated transmission to the listener.

In layman's terms, this device, this "Sound of Silence" simply allows for the unwarranted implantation of specific thoughts, emotions, and even prescribed physical actions into unsuspecting human beings. In short, it has the very real ability to turn human beings into mere puppets in the hands of certain "controllers," or puppet-masters. from WarisCrime
