Schauberger

Space and volume are **inversely disposed opposites**, which **consume** or **animate** one another depending on whether one is made to **burn** by the other or

[4] See description of **air-turbine** in Austrian Patent No. 145141, p. 115 of this book. —Ed.

6

is itself **ennobled** intrinsically through this **reciprocal intensification** and **polarization**. Today's technology mistakenly chose the former of the two processes and it is therefore no wonder that **cancer** is on the rampage here, there and everywhere.

Goethe said, "The driving wheels of **Nature** are **polarity** and **intensification** and whoever understands enough to untie also knows enough to bind." What is born in **light**, **disintegrates** in the **coolness** of the **ground**. It rises up and returns again as a **ray** of **energy** in order to **quicken** that which stands ready to become new **life** at the boundary between **space** and **volume**.

Every leaf is an **animalistic magnet** in **monoplanar form**, which **attracts** and **radiates**, depending on whether the **Sun** shines on it or **cold** caresses it. This great **law of reciprocity** also operates in **water**, which constantly **restructures** itself by altering its **space** and **volume**. The **space** is shaped by **light** and **heat**. The **volume** is a product of **darkness** and **coolness**. If we understand how to apportion the **opposing relation** between **space** and **volume** and how to organise its intrinsic **structure**, then the **substance** - **water** - will become 'The Space' and the formless **volume** its realisation, which is transformed instantaneously with **heat-pressure**, thereby creating the **motion** that fills the over-lying **inter-space**.

If **nature-alienated humanity**, however, reverses this purposeful process and **combusts** precisely those **substances** that occasion **life**, then they should no longer be surprised when the **Sun** burns up that which serves it as an **intermediate space**, and which serves humankind for the maintenance of **life**.

Life unfolds itself in **three spheres**:

1. in the **Carbone[5]** - sphere
2. in the **Atmosphere**
3. in the **Stratosphere**

The **connection** between these spheres is created by **water**. Conversely, the various **states of aggregation** of **water** form the **bridges** for the **formation** and **reconstitution** of the basic elements carried by **water**, which succeed in reaching the **Earth's** interior from the **stratosphere** and vice versa. The purely mechanical **circulation** of the physical form - **water** - operates in the opposite direction to the **circulation** of **energy**. The **rising** of the **C-substances** with their carrier - **water** - is countered by the sinking of the **oxygen**. Where these

[5] **Carbone**: In contrast to the normal use and definition of '**carbon**', Viktor **Schauberger** grouped all the known elements and their compounds, with the exception of **oxygen** and **hydrogen**, under the general classification of '**Mother Substances**', which he described with the word '**Kohle-stoffe**', normally spelt '**Kohlenstoffe**' and meaning **carbon**. Apart from the above definition the hyphen also signifies a higher aspect of **carbon**, both physically and energetically or immaterially. The additional V in the English word is therefore intended to redefine and enlarge the scope of the usual term '**carbon**' in accordance with Viktor's concepts. On occasion **carbone** will be represented by the term C' [to] differentiate it from the normal term for **carbon** — C - Ed.

7

mutually **contra-directional currents** intersect, **energy** is freed. These **energetic interactions** can never reach a **state** of **rest** due to the constant variation in the length of **night** and **day**. Inevitably therefore, there is a continual shift in the individual microclimatic conditions, which further result in variations in the **quantity** and **quality** of the basic elements. [The Energy Evolution - Harnessing Free Energy from Nature, Conclusions]

In this **formative process** the **electrical field-resistance** is also responsible for the **condensing** of the **higher-grade**

medium, which in the process of synthesis described earlier is essential for the physical encasement and insulation of every energy-form. The most important aspect of the magnetolytic (formative) dissociative process is that no low-grade heat-forms should develop during in this **restructuring** process in which, on the contrary, a cooling (freshening) temperature influence evolves. [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism is the Function of Levitism and Electricism is the Function of Gravitism]
